

PROTECTING YOUR PET FROM PARASITES?

Always read the product label and leaflet before use

Questions?
Speak to your vet team

Here's how to use treatments safely

Parasites such as fleas, ticks and worms can make your pet ill or uncomfortable. Some may also risk spreading disease to other animals or humans, so it's important to follow your vet's advice for treatment and prevention.

If not used carefully, the medicines which prevent and treat parasites may harm you, your pet, wildlife and the environment.
